

Neo4J Tools and APIs for developers

Neo4J Browser

- easily test and manipulate queries
- visualize data

Built-in REST API:

- query the database remotely with a REST API
- platform independence -- JSON over HTTP easily extensible and many bindings available
- scaling independence
- transactions support
- encapsulation and response format
 - fixed format, enhanced error handling

Clustering

- high-availability replication
- global clusters (multiregion clusters)

Shell Interface

Perfect for automating task as well as having a direct access to server's settings

Demo

- found huge dataset of currently available flyers for grocery stores, retail stores etc.
 - metro
 - super c
 - iga
 - best buy
- with a postal code, we locate nearby stores and extract discounts from flyers (deals) for products
- graph example
